## **DETAILED ACTION**

### ***Response to Amendment***

1. Applicant's amendments, filed 5/30/2006, have been fully considered and reviewed by the examiner. The examiner notes the amendments to claims 2, 9, 13, and 20. Claims 1-20 remain pending in the instant application.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 9 and 20 rejected under 35 U.S.C. 112; first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The claims include "diameter" of the silicon seed is 0.5 to 1 micron, however, the specification does not describe the size of the seed layer as the diameter, therefore such a limitation adds new matter that was not present at the time of filing.

### ***Allowable Subject Matter***

4. Claims 1-8, 10-19 are allowed.
5. The following is a statement of reasons for the indication of allowable subject matter: None of the prior art cited or reviewed by the examiner, alone or in combination,

Art Unit: 1762

discloses the method of controlling the seed position by forming the layers as claimed, specifically oblique evaporating the second metal layer onto a first metal layer, wherein each of the first and second metal layers include a plurality of continuous openings to the substrate, with subsequent removal of the first and second metal layers.

The closest prior art for silicon seeds, US Patent 5447117, discloses accurately controlling the plurality of seeds on the substrate, but fails to suggest a masking method as claims.

The closest prior art for masking, US Patent 4256816 by Dunkleberger and US Patent 4448797 by Burnham disclose masking using a similar masking structure and subsequent removal of structure, but fails to suggest oblique evaporation and/or control of crystal seed deposition.

### ***Conclusion***

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 1762

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
